

COMPLETE SOLUTIONS FROM SAMPLE TO RESULT

Complete solutions for newborn screening

WE HELP SAVE
70 BABIES
DAILY

PerkinElmer is the global market leader in neonatal screening, currently serving customers in more than 90 countries. We are a total solution provider offering complete systems based on a broad range of high quality, validated products, including newborn screening kits, consumables, instruments and software. Our global presence and comprehensive support philosophy mean that our expertise is available to you at all times.

Since 1985, almost 600 million babies have been screened with our products. Every day more than 70 babies around the world get a healthier start to life thanks to the early detection of a serious disorder.

EARLIER DETECTION WITH COMPLETE RANGE OF SCREENING SOLUTIONS FOR NBS DISORDERS

Early detection is critical to the treatment of many congenital newborn disorders. PerkinElmer's solutions help you find affected newborns in time and determine the best course of care.

DISORDERS	ANALYTES	INSTRUMENTS					
		GSP®	AutoDELFIATM	VICTOR2 TMD	QSight® MD	VICTOR EnLite™	Migele™ Gel Electrophoresis Unit
Congenital hypothyroidism	hTSH	✓	✓	✓ **			
	T4	✓	✓	✓ **			
Congenital adrenal hyperplasia	17-OHP	✓	✓	✓ ±			
Cystic fibrosis	IRT	✓	✓	✓ **			
Phenylketonuria	Phenylalanine	✓ ±		✓ **			
Galactosemia	GALT	✓		✓			
	TGAL	✓		✓ **			
G6PD deficiency	G6PD	✓ ±		✓ ±			
Biotinidase deficiency	Biotinidase	✓		✓			
Duchenne Muscular Dystrophy	CK-MM	✓ ±					
Hemoglobinopathies	Hb Variants						✓
Metabolic disorders,	Multiple				✓ ±		
ADA-SCID	Ado, dAdo				✓ ±		
X-ALD	Multiple LPCs				✓ ±		
Lysosomal storage disorders	LSDs				✓ **		
Severe combined immunodeficiency	TREC					✓

Analysis and Measurement

Analytical performance is the foundation of effective newborn screening. That is why we manufacture all our instruments and reagents to highest quality and performance standards, and source key components and technology from trusted suppliers.

Informatics

Newborn screening generates vast amounts of data that require continuous tracking. With effective information management, you can increase processes throughout and reduce costs. Our dedicated informatics solutions for newborn screening laboratories keep vital information flowing from sample to result and beyond.

Support

Our specialists help you set up and manage your screening process from start to finish. Our ultimate goal is to maximize instrument uptime and ensure that your screening results are accurate.

FROM SAMPLE TO RESULT. WE COVER THE ENTIRE SCREENING PROCESS

1 SAMPLE COLLECTION

PerkinElmer 226 Sample Collection Device is a dried blood spot collection card comprised of 100% pure cotton linter filter paper validated for even and uniform sample distribution. PerkinElmer can custom-print and manufacture a device format that meets your specialized newborn screening requirements.

2 PUNCHING

DBS Puncher® Instrument is a semi-automatic device for punching dried blood spot samples into microtitration plates. The 2-plate capacity puncher is an easy-to-use, robust option for lower capacity screening.

Panthera-Puncher™9 Instrument is the next-generation semi-automatic dried sample punching device with an automatically adjusting punch pattern. Thanks to its outstanding ergonomics, enhanced traceability and unique 9-plate capacity, Panthera-Puncher instrument allows you to process sample materials with optimum efficiency and performance.

3 ANALYSIS AND MEASUREMENT PLATFORMS

QSite® MD screening system is designed for routine high throughput quantitation. With easy to use instrument control software, the ability to automatically download sample and standard information, a mass spectrometer designed to reduce maintenance and repair and data analysis software designed to make it quick and easy to review results, the QSite® MD Screening System makes it easy to run up to thousand samples per day

Disorders: Metabolic Disorders±, ADA-SCID±, X-ALD±, And Lysosomal Storage

Disorders**

Migle™ Gel Electrophoresis Unit Instrument is a robust, scalable and easy to use instrument for detection of crucial lifesaving disorders. It works with the RESOLVE™ hemoglobin kit to detect hemoglobinopathies in newborns and adults, including sickle cell disease and other hemoglobin variants and thalassemias.

Disorders: Hemoglobinopathies

GSP® Instrument is the most advanced screening platform for neonatal dried blood spot assays and the system of choice for medium to large laboratories. Performing all assay stages automatically with superior accuracy and traceability, GSP instrument supports our complete range of analytes and employs several measurement techniques for screening of core NBS disorders. From plate loading to results output, GSP instrument offers laboratories outstanding efficiency and confidence throughout the screening process.

Disorders: Congenital Adrenal Hyperplasia, Congenital Hypothyroidism, Galactosemia, Phenylketonuria±, Cystic Fibrosis, Biotinidase Deficiency, G6pd Deficiency*, Duchenne Muscular Dystrophy*

AutoDELFA® Instrument is a fully automatic neonatal screening platform for sensitive and precise quantitation of four assays based on DELFIA chemistry. Combining versatility with ease of use, AutoDELFA instrument also supports prenatal screening. For medium to large laboratories that perform 1,000 – 2,000 DELFIA tests per day.

Disorders: Congenital Adrenal Hyperplasia, Congenital Hypothyroidism, Cystic Fibrosis

VICTOR2™ D Instrument is the ideal measurement platform for low volume laboratories. Easy to use and reliable, Victor2 provides start-up screening programs with the right balance of cost-effectiveness and control.

Disorders: Congenital Adrenal Hyperplasia*, Congenital Hypothyroidism**, Galactosemia, Phenylketonuria**, G6PD Deficiency*, Phenylalanine±, Cystic Fibrosis*, Biotinidase Deficiency

Trinest™ Incubator shaker instrument

DELFA® Washer-diskremover instrument

DELFA® Plateshake instrument

DELFA® Plate wash instrument

EnLite™ Neonatal TREC Instrument is PerkinElmer's platform for molecular screening of severe combined immunodeficiency (SCID). This complete system includes ready-to-use reagents, a Victor EnLite instrument and dedicated software. Combined with continuous support and effective training, Enlite Neonatal TREC system stands out as the practical approach to SCID screening.

Disorders: Severe Combined Immunodeficiency

INFORMATICS

SPECIMEN GATE®
SOFTWARE

As the global leader in newborn screening, PerkinElmer was well-positioned to develop the world's first laboratory information management system specifically intended for newborn screening. Specimen Gate® is the result of years of continuous development, and the product is widely used in all parts of the world.

Specimen Gate® software modules providing control and monitoring tools for the entire screening process:

LABORATORY®

For managing the laboratory processes. Specimen Gate Laboratory Enterprise Edition software allows two-way communication with PerkinElmer punching devices and instruments, and interfaces to third-party instruments too. It models the processes involved in punching; allows electronic gathering of test results from all instruments; flags analytes and disorders based on site-specific logic; and includes both Quality Control data management as well as Cutoff Analysis tools.

- Models the punching
- Gathers test results from all instruments
- Flags analytes and disorders

SCREENING CENTER™

Specimen Gate® Screening Center™ software focuses on the overall management of newborn screening programs. It allows smooth handling of patient demographics and patient reports; offers the ability to enter and track patient and contact information; and supports creating of business rules to govern the content of patient reports. Ad-hoc querying and statistical information to monitor the performance of the program is provided.

- Easier handling of patient demographics and patient reports
- Entry and tracking of patient and contact information
- Business rules for patient reports

PATIENTCARE™

For follow up of screen-positive patients and unsatisfactory specimens. Specimen Gate® PatientCare™ software allows users to define and monitor the processes used to follow up a positive determination. Cases are created within PatientCare™ software, allowing users to track the tasks associated with follow up. Users can define procedure templates for each disorder in the test panel. Each template is made up of individual tasks and includes automatic follow-up workflow procedures reminding of necessary actions.

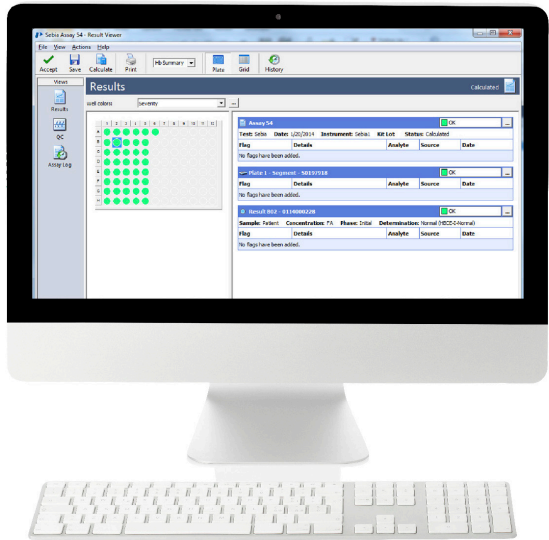

- Every case requiring follow up is monitored
- Electronic updating of tasks performed
- Reminds of necessary actions

eREPORTS™

Specimen Gate® eReports™ software allows end users to view patient reports online. Remote data entry of patient demographics is available. The application is hosted on a server provided by the customer to ensure that customers retain control over the information to which end-users have access.

Reports created by the laboratory using Screening Center™ and/or PatientCare™ software are available 24h/7d through the secure web connection.

- End-users can use eReports to send demographic data or test results back to the laboratory
- Cost and time savings are immediately realized

COMPLETE
SOLUTION
EXAMPLES

EVERYTHING YOU NEED FOR
EFFICIENT NEWBORN SCREENING

PerkinElmer provides you with the tools you need to run a successful and cost-effective neonatal screening program. We offer a broad range of systems and solutions for every type of laboratory from manual low cost alternatives to more sophisticated fully automated solutions.

FOR LOW VOLUME LABORATORIES

– when costs must be kept down, but performance must not be compromised

Some general examples of solutions for different laboratory needs are given below. To find the optimal solution for your laboratory, please contact your local PerkinElmer representative.

FOR LOW TO MEDIUM VOLUME
LABORATORIES

– when your panel or volume expands

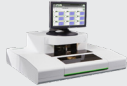

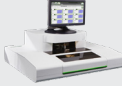

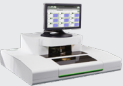

FOR MEDIUM TO LARGE
VOLUME LABORATORIES

– when you value automation and traceability

HIGH VOLUME EXPANDED
LABORATORIES

– when high automation, full traceability, seamless integration and instruments with two-way communication are your standards

BENEFITS Low setup costs, low maintenance costs, reliable results.			BENEFITS Automation of immunoassays and screening for hemoglobinopathies, good traceability of the punching process. Two-way communication between instruments.			BENEFITS High traceability in the sample processing process, consolidated platforms, full automation and high capacity.			BENEFITS Full traceability throughout the process, consolidated platforms, full automation and high capacity. Two-way communication between instruments and easy patient reporting system.		
TO CONSIDER This solutions demands manual assay preparation, which reduces traceability and increases risk of human errors. This laboratory might considerMigele™ Gel Electrophoresis Unit system for cost effective hemoglobinopathies screening.			TO CONSIDER: AutoDELFIA instrument is limited to DELFIA assays. GSP instrument can be considered an option for AutoDELFIA as a fully automated/ higher capacity solution compatible with future expansions to include enzymatic assays.			TO CONSIDER: This laboratory might consider including Specimen Gate™ Laboratory® software solution for seamless communication between instruments and better monitoring of the laboratory performance and workflow.			TO CONSIDER: With the addition of Migele™ Gel Electrophoresis Unit Instrument this laboratory would enable screening for hemoglobinopathies.		

SUPPORT

BETTER SUPPORT.
MORE EFFECTIVE PROCESS.

Through our experts in newborn screening, we can help you to create service programs that meet the standards of even the most demanding screening laboratories. Our global presence and holistic understanding of newborn screening enables our screening solutions to share both innovation and know-how effectively.

Newborn Screening Support			
Consultation	Training	Service Excellence	Customer Support
<p>PerkinElmer develops, manufactures and supports a market leading range of instruments, reagents, and consumables to the screening community.</p> <p>Providing unparalleled knowledge and depth of expertise with over 75 years of experience, PerkinElmer is a company you can count on to be there when you need us.</p>	<p>Our training team offers diagnostics product training courses for customers. Training is conducted by product managers and specialists from customer and technical support, software services and R & D. We aspire meet your training expectations and to give you the best possible training experience.</p>	<p>PerkinElmer's dedicated diagnostics service team comprises trained and certified engineers who have an average of 15 years of experience maintaining PerkinElmer and partner equipment.</p>	<p>Our product specialist and technical support teams provide country and regional support. That's why PerkinElmer is able to provide the best service in the industry.</p>
